AI CAREER
NAVIGATOR

Career Paths in an AI Era

The 2026 job market wants AI-adjacent capability inside roles that never asked for it. Careers advice still starts from job titles instead of from what a person can actually do — so the distance between a learner's strengths and the market stays invisible.

Career Construction Theory — careers are built, not assigned
Social Cognitive Career Theory — belief decides what we try
Information Asymmetry — the market hides what it wants

AI CAREER NAVIGATOR

Meet Aina

Hi, I’m Aina. Four months after graduation I still had no job in new energy — every posting asked for data analysis and energy forecasting I was never taught.

Renewable energy graduate

22 · four months since graduation · no offer yet

Campus sustainability project is her proof, not her grade sheet

Needs data analysis and energy forecasting beyond her major

Has five hours a week and a $300 learning budget

aicareer.replit.app/#/intake · four steps, five minutes

Skills

23 capabilities across five families, rated 1–5

Preferences

five hours a week, $300, her interests

Review

saved, then 12 future roles are scored

Personal Profile

24 SOURCES · 1,840 RECORDS

Signal Layer

20 dated signals

19 publishers, all linked

Rising, stable or declining

Scenario Lab

Baseline adoption · 58% likelihood

Adoption continues at today's pace. Net employment +1.8%, 24% of tasks automated, reskilling demand 68/100, wage polarisation 52/100.

Accelerated automation · 26%

Agentic systems move from assistant to actor. Net employment −2.6%, 41% of tasks automated, reskilling demand 86/100, polarisation 71/100.

Greener, regulated · 16%

Climate disclosure and AI rules tighten together. Net employment +0.9%, 29% of tasks automated, reskilling demand 79/100, polarisation 58/100.

THREE PHASES · 5 HOURS A WEEK

The plan is built from the gap, not from a catalogue. Aina’s top match is Agri-Food Systems Analyst at 90/100, and the two gaps that matter — research and data literacy — are closed with free activities, projects and peer reviews.

Three phases turn those gaps into a plan: foundations, role-specific skills, then portfolio development. At five hours a week it lifts projected readiness from 83 to 95 — a projection, not a promise.

Reskilling Pathway

SDG Mapping

Every role carries a weighted SDG contribution with a written rationale — never a logo strip. Aina’s path scores highest on SDG 4 Quality education (91), SDG 13 Climate action (88) and SDG 10 Reduced inequalities (74), with the roles, skills and evidence behind each.

Inside the Build

Frontend

Native ES modules and no build step. Self-escaping templates, a hash router and hand-written SVG charts; one API facade switches between the live service and an offline demo.

Data and API

Python over SQLite: 23 skills, 12 roles, 3 scenarios, 37 learning modules, 20 dated signals from 21 sources. Every endpoint is pinned by an OpenAPI 3.1 contract.

AI layer

Briefings are composed server-side and streamed as Server-Sent Events, so model keys never reach the browser. Scoring itself stays deterministic and inspectable.

SOURCED · INSPECTABLE · OFFLINE

Every signal carries a publisher, a publication date and a source link: 20 records from 19 publishers, no undated trend claims. The prototype’s figures are modelled, and the interface says so on every screen instead of hiding it.

Scoring is transparent. Fit is the weighted overlap between your rated levels and each role’s required levels, adjusted for sector, experience and interests. The method is published in the app, and the same rules run offline — so a demo cannot drift from the product.

Evidence First

AI CAREER NAVIGATOR

Expected Impact

5 hours a week. $300.
Readiness 83 → 95.

For individuals

A defensible answer to “what should I learn next”, with time, cost and portfolio evidence attached.

For employers and government

An auditable signal-to-plan pipeline, with reskilling demand modelled at 68–86/100 across three 2028 futures.

For public value

Every matched pathway is mapped to the SDGs it would actually serve — SDG 4 and SDG 13 first for this profile.

Your Value is Undefined
